General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

- 0- The following precautions should be taken when handling microprocessing unit and microcontroller unit products:
 - 1- The products should be handled in a clean, dry, and static-free environment. The products should be stored in their original packaging until they are ready to be used.
 - 2- The products should be handled by the person who is responsible for the assembly and testing of the product. The person should wear a clean, white lab coat and gloves.
 - 3- The products should be handled with care. They should not be dropped, thrown, or otherwise abused.
 - 4- The products should be handled in a way that prevents damage to the components. The components should not be touched with bare hands.
 - 5- The products should be handled in a way that prevents damage to the packaging. The packaging should not be opened until the products are ready to be used.
